

Supplementary Figure 1. Calibration plot of CLIF-SOFA scores. Diagonal line is the line of perfect calibration. Dots represent the intersects of observed and expected values for the risk of mortality, and bars represent the 95% confidence interval of the observed probability. Blue line indicates the calibration trend; since this line is close to the diagonal line, it indicates that the CLIF-SOFA fits the data well. CLIF-SOFA, Chronic Liver Failure-Sequential Organ Failure Assessment.
