

Supplementary Figure 5. Naïve T cells isolated from healthy controls were incubated in media supplemented with supernatant from the fatty-acid treated HepG2 cells, resulting in increased Th1 cell skew. (A) Representative gating strategy to identify the proportion of CXCR3⁺CCR6⁻ T helper cells, pre-gated on live, singlet CD3⁺CD4⁺ leukocytes. (B) Representative gating strategy to identify the proportion of IFN γ ⁺IL4⁻ T helper cells, pre-gated on live, singlet CD3⁺CD4⁺ leukocytes. P values were determined by Man-Whitney U test (experiments n=3).
