

**Supplementary Figure 1.** NMP is insufficient for improving the outcome of FML patients. K–M plot of overall survival (A) and postoperative 90-day survival (B) of FML patients who underwent SCS or NMP. The serum AST (C), ALT (D), and Tbil (E) levels of FML patients in the SCS and NMP groups seven days after the operation. NMP, normothermic machine perfusion; FML, functionally marginal liver grafts; SCS, static cold storage; AST, aspartate aminotransferase; ALT, alanine aminotransferase; Tbil, total bilirubin. \* $P < 0.05$ , \*\* $P < 0.01$ , \*\*\* $P < 0.001$ , \*\*\*\* $P < 0.0001$ .
