
Supplementary Figure 2. Differential expression analysis and Kaplan–Meier analysis in patients with HCC. (A) Differential expression analysis of RNA and protein levels of 4 ubiquitin-related genes in HCC tissues and normal tissues based on the UALCAN database. **P*<0.05, ****P*<0.001. (B) Kaplan–Meier analyses of the expression levels of 4 ubiquitin-related genes and overall survival or disease-free survival in patients with HCC based on the GEPIA2 database. HCC, hepatocellular carcinoma; ns, no statistical difference.
