
Supplementary Figure 1. The independent associations of age, sex, MASLD, MASH, SS, BMI, and IFG/DM with incident cholelithiasis. (A) The independent associations of age, MASLD, MASH, SS, BMI, and IFG/DM with incident cholelithiasis after adjusting for sex. (B) The independent associations of age, sex, MASLD, MASH, SS, and BMI with incident cholelithiasis after adjusting for IFG/DM. (C) The independent associations of age, MASLD, MASH, SS, and BMI with incident cholelithiasis after adjusting for sex and IFG/DM. BMI, body mass index; IFG/DM, impaired fasting glucose/diabetes mellitus; MASLD, metabolic dysfunction-associated steatotic liver disease; MASH, metabolic dysfunction-associated steatohepatitis; SS, simple steatosis.
